

# GAUGE RAKE

## concrete application tool

## DESCRIPTION

**Stone Edge Surfaces Midwest Gauge Rake** is a 24" wide head gauge rake equipped with two sets of interchangeable cams. A **Gauge Rake** is used for applying horizontal concrete overlay mixes, self-leveling concrete mixes (to help disperse and break the surfaces tension to keep it flowing), high performance floor coating materials and underlayment materials where precise, uniform depth is desired. The **Gauge Rake** comes with interchangeable "depth" cams, which help you achieve a smooth floor with the desired thickness.

Based on 25 years of concrete overlay application experience, Gregg Hensley recommends the Midwest **Gauge Rake** (the one we sell), because its design allows the applicator to achieve a perfect depth without having to maintain a specific angle on the rake head. This is very important when several applicators are applying overlay at the same time on the same job and consistency across the project is crucial.

After applying and using the **Gauge Rake** to get the perfect depth...use a trowel or smoother to smooth out your overlay mix to prepare it for stamping or carving. Need a different thickness, simply change the removable CAMS on the ends of the **Gauge Rake** to one of the many sizes available. The most common depths are (1/4") #4 and (3/8") #6...which is why we sell our **Gauge Rake** with the #4 & #6 included along with the "threaded handle adapter."

NOTE: We only sell the head and cams, you must provide your own locally sourced long handle.

1 Gauge Rake Head with #4 & #6 Cam Sets (#FXTL135)

## MOST COMMON USES

Applying overlays at consistent depths, and helping self-levelers flow by moving the mix and breaking the surface tension so they continue to flow.

### PRODUCTS USED WITH:

- Stamp Mix
- Spray Mix
- Self-Leveler
- Trowel Mix
- MicroTop
- Level Slope
