

SMOOTHER

concrete application tool

DESCRIPTION

Stone Edge Surfaces Midwest Rake Concrete Smoother is basically a concrete trowel on steroids, and is built with a 24" heat-treated steel, fan-shaped blade that helps you get closer to walls and obstructions, and it's used with a long handle while standing versus on your knees, like you do with a hand trowel. Hand troweling can be tough on the body and knees, especially when troweling large areas, so a **Concrete Smoother** can help save your knees and back while delivering a beautiful smooth concrete finish every time. The **Concrete Smoother** is also a "dual Use" tool and can be used as a smoother or spreader.

To use the **Concrete Smoother as a SMOOTHER**, use as shown in the picture to the right and leave the blade angle flat with the concrete surface and use the blade like a trowel.

To use the **Concrete Smoother as a SPREADER**, simply flip the smoother over so the blade faces down and use the blade to push and pull the overlay mix where you need it to go, then flip it over and use it as a trowel again.

MOST COMMON USES

Smoothing or spreading concrete overlays and helping self-levelers flow by moving the mix and breaking the surface tension so they continue to flow.

PRODUCTS USED WITH:

- Stamp Mix
- Trowel Mix
- Spray Mix
- MicroTop
- Self-Leveler
- Level Slope
