Professional Grade Concrete Overlays

DESCRIPTION

Stone Edge Surfaces Level Slope™ is a flat roof ponding water and low spot filler as well as a roof sloping compound to increase positive slope, create crickets, and more.

Level Slope is a just add water, pre-sanded, heavily polymerized, polymeric concrete. **Level Slope** does not require any primer to physically and chemically bond to existing roofing material to fill ponding areas and create positive slope to direct water toward roof edges, scuppers and drains.

Level Slope™ does not need primer, is long lasting, durable, easy to apply, and can have aggregate added, but is not required, except as a covering layer and for aesthetics.

Level Slope™ is also a **Sloping Compound** that can be applied and troweled from 4" thick to feather thin to create proper slope for drainage, and can be overlaid with waterproofing membrane, LWIC, Hot Tar, EPDM, TPO, roof aggregate, etc.

MOST COMMON USES

- Flat Roof Low Spot or Pooling Area Filler
- As a Sloping Compound to create positive slope on Roofs, Balconies, Decks, Walkways and more.

APPLICATION

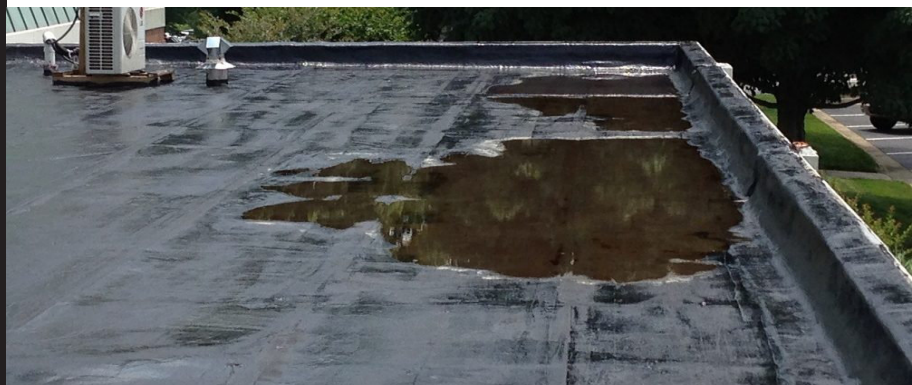

APPLICATION: As a Flat or Low Slope Roof Low Spot Filler...Follow directions to mix thinner and pour as a Self Leveler, Screed High Spots with a board or screed, add aggregate if desired or just cover with roof stone.

APPLICATION: As a Sloping Compound...Mix thicker, trowel into place from 4" to Feather Thin.

WORKING TIME: 20 Minutes to 1 hour depending on thickness, Temperature, humidity and other factors.

LEVEL SLOPE™

FLAT ROOF LOW SPOT FILLER - SLOPING COMPOUND
